Android Password Manager You Trust Could be Exposing Login Data

The team of researchers assessed nine of the hugely popular Android password managers that are available to be downloaded on Google Play. The nine password managers include Erkan Molla's My Passwords, LastPass, F-Secure KEY, Password Manager from InformatiCore, Avast Passwords, 1Password, Dashlane Password Manager, Keeper and KeepSafe.

The team identified 26 inherent issues most of which were patched by the developers after one month of their reporting except for Avast that did not release a patch for the security flaw.
