Hackers Steal 2.5 Million PlayStation and Xbox Players' Details in Major Breach

Hackers stole the information from two popular gaming forums back in 2015, and managed to take details including email addresses, passwords and IP addresses, it has recently been revealed.

The forums called Xbox360 ISO and PSP ISO let gamers share and download free and pirated copies of games.

It isn't clear who was behind the attacks or if the sites knew about the breaches when they occurred two years ago.
